Budget creation limited

Because Cost Explorer is not enabled for this account, AWS Budgets does not have access to your billing data. This limits the creation of some budget types and configuration options. To enable these options, either create a budget or enable Cost Explorer. Changes can take up to 24 hours to take effect. [Learn more](#)

Enable Cost Explorer

Budget types

Cost budget - Recommended

Monitor your costs against a specified dollar amount and receive alerts when your user-defined thresholds are met. Using cost budgets, the budgeted amount you set represents your expected cloud spend. For example, you can set a cost budget for a business unit and then add additional parameters such as the associated member accounts.

Usage budget

Monitor your usage of one or more specified usage types or usage type groups and receive alerts when your user-defined thresholds are met. Using usage budgets, the budgeted amount represents your expected usage. For example, you can use a usage budget to monitor the usage of certain services such as Amazon EC2 and Amazon S3.

Savings Plans budget

Track the utilization or coverage associated with your Savings Plans and receive alerts when your percentage drops below a threshold you define. Setting a coverage target lets you see how much of your instance usage is covered by Savings Plans, while setting a utilization target lets you see if your Savings Plans are unused or underutilized.

Reservation budget

Track the utilization or coverage associated with your reservations and receive alerts when your percentage drops below a threshold you define. Setting a coverage target lets you see how much of your instance usage is covered by reservations, while setting a utilization target lets you see if your reservations are unused or underutilized. Reservation alerts are supported for Amazon EC2, Amazon RDS, Amazon Redshift, Amazon ElastiCache, and Amazon Elasticsearch reservations.

Set your budget

Because Cost Explorer isn't enabled for this account, you won't be able to view or filter your historical data when creating a budget. After creating a budget, Cost Explorer will automatically be enabled and it can take up to 24 hours to populate all of your spend data. [Learn more](#)

How to set up your budget

Step 1: Set budget amount

Select the period and whether you would like to have a fixed budget or to specify a budget plan, then enter your budget amount.

Step 2: Scope your budget - optional

Add dimensions of data to narrow on a set of cost information. For example, you could select a number of AWS services to track as part of this budget.

Step 3: Enter in remaining budget details

Define the budget name.

Configure alerts [Info](#)

Why create budget alerts?

In order to be notified on the state of your budget, you can create up to 5 different alerts based on your budgeted amount. For example, create an alert to notify you when you have reached 75% of your budgeted amount.

How to get started?

Start by defining alert thresholds, then specify alert recipients and how you would like them to be notified. Alerts can be sent via email, AWS SNS, and AWS Chatbot.

Budget amount

Your budgeted amount: **\$1.00**
To change your budgeted amount, go back to step 2.

Attach actions - Optional [info](#)

▼ Using budgets actions

What is a budget action?

A budget action allows you to define and trigger cost saving responses to reinforce a cost-conscious culture. You have the option to attach actions that run whenever your alert threshold has been exceeded, such as stopping an EC2 instance from incurring any further costs. You can select the alerts to which you would like to attach actions, then define these actions.

How to get started?

To create a budget action, you will first need an alert threshold created from step 2. If you have already created an alert threshold select the type of action you want.
